

Service Bulletin

BFS Announces an Improved Connector

BFS is pleased to announce a new and improved ergonomically friendly connector to its product offering. The new blue connector will be easier to connect since it does not require pulling back on the spring loaded mechanism that our old connector required. It simply snaps into place. When disconnecting, the push of a button will release the connector. The connector has an advanced internal design that avoids leakage when connecting and disconnecting.

Effective January 15th, 2009, all kit orders will include the new style connector. At that time, all delivery items (i.e. direct fill links, etc.) will also include the compatible female connector. The old grey style connectors will still be available as well as all other brands of connectors, but it needs to be specified on the purchase order. **All purchase orders received on January 15th or later that do not specify a certain type of connector will get the new blue style.**

Battery Filling Systems is also eliminating the 10mm tubing used with the filling tubes and connectors, excluding mining kits. In order to keep tubing consistent, 6mm tubing will be used in the filling tube and to attach to the connectors.

For questions on the new connectors or ordering, please contact our office at 877-522-5431.

3/8" Female Connector
Part # 09FBLU1

1/4" Male Connector
Part # 09MBLU1
